

# Scene One

Pirate: Arrrrrrrrrrr!!!

Andy: Oh, you're an R enthusiast like me

P [looking confused]: Arrrrrrrrrrrr

A: Yes, R, the open source statistical computing language ... it's great ...

P: What be ye talking about ye funny little man? I be contacting you with a mission of great import. I am Grim-Faced Jakey, head of the Pirate academy, where we train pirates to ... erm .... become pirates, which be why we be called the pirate academy. But we be having a problem. Let me show ye.

[pirate academy video]

A: Right, so your pirate trainees are using AI to do their work for them?

P: That be correct. The other day I set this task:

I found a map in Theloneous Bumbleweed's desk drawer. It be brown and discoloured. It depicts a coastline, with caves, a beach and sea. There be a picture of large angry-looking squid in the sea. The beach be covered in human skulls. A large X be drawn close to where the beach meets one of the caves. Should ye travel there?

This be what one pirate submitted:

Let's assess the situation:

- Old map in a mysterious desk drawer? Intriguing, but possibly a prop or forgery.
- Angry squid and skull-covered beach? Classic cartographer shorthand for "here be danger."
- Big red X? Traditionally means "treasure," but also possibly "death trap."
- I'd strongly recommend not travelling there until you verify the map's authenticity and the area's safety.

[Angry]: Big red X a death trap! A death trap! The first rule of piracy be X always means treasR, even if it be buried under a death trap. The map a prop or forgery .... The second rule of piracy be that all maps be real, even the forgeries, because what be the best way to hide a real treasure map? It be to forgery it. Do not travel until you have verified the areas safety. The third rule of piracy be bumble into all situations with gusto and reckless abandon. Verify the safety my arrrrrrrrrr.

Grim-Faced Jakey need ye to investigate the effects of this behaviour on pirate minds - our booty haul is poorer than Penny Farthington with all this talk of health and safety. If ye

refuse, me piranhas will feast on yer entrails.

## Scene 2

A: The data seem to suggest that by using AI your pirates are reducing their ability to think critically about the world. This seems to be driven by offloading cognitive tasks onto technology. In short, their not exercising their brains.

P: Are you telling me that using AI is turning my pirates into a bunch of mindless clones, incapable of critical or individual thought, who will lack the ability to question the information they receive?

A: Well, I didn't exactly say that, but, I guess ... sort of .... although the study measures were fairly awful ...

P: arrrrr, this be excellent news to grim-faced Jakey, because I be the sort of pirate captain who values a crew who follow my orders without question. If I say "jump into that giant squids mouth", I be wanting my pirates to scream 'open wide squiddy' afore jumping. Grim-faced Jakey may have been too quick to judge this new fangled technology. How can I use it to weaken the minds of my pirates even more?

A: Well, I guess I can try to find out ...

## Scene 3

A: The data seem to suggest that perhaps you can increase cheating with AI by changing the subjective norms of your trainees.

P: Be ye suggesting we make it acceptable rather than the territory of miscreants and ner-do-wells? Ye be telling Grim-Faced Jakey to stop using his cat-o-nine-tails on the scallywags that be using it?

A. Maybe?

P; You be most helpful sir, your reward be not seeing your own entrails upon the floor.

Arrrrrrrr
